"Complete sequence of the Drosophila nonmuscle myosin heavy-chai
transcript: conserved sequences in the myosin tail and different
splicing in the 5' untranslated sequence.";
Proc. Natl. Acad. Sci. U.S.A. 87:6316-6320(1990).
-!- FUNCTION: NONMUSCLE MYOSIN APPEARS TO BE RESPONSIBLE FOR
-!- CELLULARIZATION. REQUIRED FOR MORPHOGENESIS AND CYTOKINESIS.
-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS: A LONG FORM (SHOWN HERE) A
SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.
-!- SIMILARITY: CONTAINS 1 MYOSIN-LIKE GLOBULAR HEAD DOMAIN.
                                                                                                                                                                                                                                                                                                                                   Eukaryota; Metazoa; Arthrope

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         221
FUNCTION: MUSCLE CONTRACTION.
SUBGUNIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS
SUBGUNIT: MUSCLE MYOSIN IS A LEXAMERIC PROTEIN SUBUNITS (M
HEAVY CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC-2).
AND 2 REGULATORY LIGHT CHAIN SUBUNITS (MLC-2).
AND 2 REGULATORY LIGHT CHAIN SUBUNITS OF THE MYOFIBRILS.
SUBCELLULAR LOCATION: THICK FILAMENTS OF THE MYOFIBRILS. SHOW
DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOW
CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  KLQNELDMLKQNNLKNEEELTKSKELLNLENKKVEELKKEFEALKLAAAQKSQQLAALQE
